# IEC 60870-5-101 Master PICS for MGate 5119 

## Interoperability

This companion standard presents sets of parameters and alternatives from which subsets must be selected to implement particular telecontrol systems. Certain parameter values, such as the choice of "structured" or "unstructured" fields of the INFORMATION OBJECT ADDRESS of ASDUs represent mutually exclusive alternatives. This means that only one value of the defined parameters is admitted per system. Other parameters, such as the listed set of different process information in command and in monitor direction allow the specification of the complete set or subsets, as appropriate for given applications. This clause summarizes the parameters of the previous clauses to facilitate a suitable selection for a specific application. If a system is composed of equipment stemming from different manufacturers, it is necessary that all partners agree on the selected parameters.

The interoperability list is defined as in IEC 60870-5-101 and extended with parameters used in this standard. The text descriptions of parameters which are not applicable to this companion standard are strike-through (corresponding check box is marked black).

NOTE In addition, the full specification of a system may require individual selection of certain parameters for certain parts of the system, such as the individual selection of scaling factors for individually addressable measured values.

The selected parameters should be marked in the white boxes as follows:

## $\square$ Function or ASDU is not used

X Function or ASDU is used as standardized (default)
R Function or ASDU is used in reverse mode
B Function or ASDU is used in standard and reverse mode

The possible selection (blank, $X, R$, or $B$ ) is specified for each specific clause or parameter.

A black check box indicates that the option cannot be selected in this companion standard.

### 1.1 System or device

(system-specific parameter, indicate definition of a system or a device by marking one of the following with "X")

## $\square$ System definition

X Controlling station definition (Master)
$\square$ Controlled station definition (Slave)

### 1.2 Network configuration

(network-specific parameter, all configurations that are used are to be marked "X")

| $\mathbf{X}$ | Point-to-point | $\boxed{X}$ | Multipoint-partyline |
| :--- | :--- | :--- | :--- |
| $\mathbf{X}$ | Multiple point-to-point | $\square$ | Multipoint-star |

$\mathbf{X}$ Multiple point-to-point $\quad \square$ Multipoint-star

### 1.3 Physical layer

(network-specific parameter, all interfaces and data rates that are used are to be marked "X")

| X | $600 \mathrm{bit} / \mathrm{s}$ |  |  | X | $19200 \mathrm{bit} / \mathrm{s}$ |  |
| X | 1200 bit/s |  |  | X | $38400 \mathrm{bit} / \mathrm{s}$ |  |

### 1.4 Link layer

(network-specific Time during which repetitions are permitted (Trp) or number of repetitions parameter, all options that are used are to be marked "X". Specify the maximum frame length. If a non-standard assignment of class 2 messages is implemented for unbalanced transmission, indicate the Type ID and COT of all messages assigned to class 2.)

Frame format FT 1.2, single character 1 and the fixed time out interval are used exclusively in this companion standard.

## Link transmission

X Balanced transmission
X Unbalanced transmission

## Frame length

252
Maximum length L (control direction)

Address field of the link

X Not present (balanced transmission only)
$\mathbf{X}$ One octet
X Two octets
$\square$ Structured
Unstructured

Maximum length $L$ (monitor direction)

3 Time during which repetitions are permitted (Trp) or number of repetitions

Moxa Inc.
13F, No. 3, Sec. 4, New Taipei Blvd., Xinzhuang Dist. New Taipei City 242032, Taiwan, R.O.C.
Tel: +886-2-8919-1230
Fax: +886-2-8522-8623
www.moxa.com
When using an unbalanced link layer, the following ASDU types are returned in class 2 messages (low priority) with the indicated causes of transmission:

X The standard assignment of ASDUs to class 2 messages is used as follows:

| Type identification | Cause of transmission |
| :---: | :---: |
| $9,11,13,21$ | $<1>$ |

$\square$ A special assignment of ASDUs to class 2 messages is used as follows:

| Type identification | Cause of transmission |
| :---: | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

Note: (In response to a class 2 poll, a controlled station may respond with class 1 data when there is no class 2 data available).

### 1.5 Application layer

## Transmission mode for application data

Mode 1 (Least significant octet first), as defined in 4.10 of IEC 60870-5-4, is used exclusively in this companion standard.

## Common address of ASDU

(system-specific parameter, all configurations that are used are to be marked "X")
X One octet
X Two octets

## Information object address

(system-specific parameter, all configurations that are used are to be marked "X")
X One octet
X Two octets
$\square$ Structured
$\square$ Unstructured
$\mathbf{X}$ Three octets

## Cause of transmission

(system-specific parameter, all configurations that are used are to be marked "X")

## X One octet

X Two octets (with originator address).
Originator address is set to zero if not used

### 1.6 Basic application functions

## Station initialization

(station-specific parameter, mark " X " if function is used)
Remote initialization

## Cyclic data transmission

(station-specific parameter, mark "X" if function is only used in the standard direction, "R" if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions)

X Cyclic data transmission

## Read procedure

(station-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions)

Read procedure

## Spontaneous transmission

(station-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions)

X Spontaneous transmission

## Double transmission of information objects with cause of transmission spontaneous

(station-specific parameter, mark each information type "X" where both a Type ID without time and corresponding Type ID with time are issued in response to a single spontaneous change of a monitored object)

The following type identifications may be transmitted in succession caused by a single status change of an information object. The particular information object addresses for which double transmission is enabled are defined in a project-specific list.

## Station interrogation

(station-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and "B" if used in both directions).

| $\mathbf{X}$ | global |
| :--- | :--- |
| $\mathbf{X}$ | group 1 |
| $\mathbf{X}$ | group 2 |
| $\mathbf{X}$ | group 3 |
| $\mathbf{X}$ | group 4 |
| $\mathbf{X}$ | group 5 |
| $\mathbf{X}$ | group 6 |

| $\mathbf{X}$ | group 7 |
| :--- | :--- |
| $\mathbf{X}$ | group 8 |
| $\mathbf{X}$ | group 9 |
| $\mathbf{X}$ | group 10 |
| $\mathbf{X}$ | group 11 |
| $\mathbf{X}$ | group 12 |

| $\mathbf{X}$ | group 13 |
| :--- | :--- |
| $\mathbf{X}$ | group 14 |
| $\mathbf{X}$ | group 15 |
| $\mathbf{X}$ | group 16 |

Information object addresses assigned to each group must be shown in a separate table.

## Clock synchronization

(station-specific parameter, mark "X" if function is only used in the standard direction, "R" if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions).

X Clock synchronizationDay of week used
RES1, GEN (time tag substituted/ not substituted) usedSU-bit (summertime) used
optional, see 7.6

## Command transmission

(object-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions).

X Direct command transmission
X Direct set point command transmission
X Select and execute command
X Select and execute set point command
X C_SE ACTTERM used
$\mathbf{X}$ No additional definition
X Short-pulse duration (duration determined by a system parameter in the outstation)
$\mathbf{X}$ Long-pulse duration (duration determined by a system parameter in the outstation)
X Persistent output

## Transmission of integrated totals

(station- or object-specific parameter, mark "X" if function is only used in the standard direction, "R" if only used in the reverse direction, and "B" if used in both directions).
$\square$ Mode A: Local freeze with spontaneous transmission
$\square$ Mode B: Local freeze with counter interrogation
$\square$ Mode C: Freeze and transmit by counter-interrogation commands
$\square$ Mode D: Freeze by counter-interrogation command, frozen values reported

X Counter read
$\square$ Counter freeze without reset
$\square$ Counter freeze with reset
$\square$ Counter reset

X General request counter
X Request counter group 1
X Request counter group 2
X Request counter group 3
X Request counter group 4

## Parameter loading

(object-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions).
$\square$ Threshold value
Smoothing factor
$\square$ Low limit for transmission of measured values
$\square$ High limit for transmission of measured values

## Parameter activation

(object-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " B " if used in both directions).

Act/deact of persistent cyclic or periodic transmission of the addressed object

## Test procedure

(station-specific parameter, mark " $\mathbf{X}$ " if function is only used in the standard direction, " $\mathbf{R}$ " if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions).

## File transfer

(station-specific parameter, mark "X" if function is used).
File transfer in monitor direction

Transparent file
$\square$ Transmission of disturbance data of protection equipment
$\square$ Transmission of sequences of events
$\square$ Transmission of sequences of recorded analogue values
File transfer in control direction
$\square$ Transparent file

## Background scan

(station-specific parameter, mark "X" if function is only used in the standard direction, "R" if only used in the reverse direction, and "B" if used in both directions).

X Background scan

## Acquisition of transmission delay

(station-specific parameter, mark "X" if function is only used in the standard direction, "R" if only used in the reverse direction, and " $\mathbf{B}$ " if used in both directions).

Acquisition of transmission delay
